

Mixtures comprising strobilurins and ethylene modulators

Abstract

5 The present invention relates to mixtures comprising

a) a compound of the formula I

in which X, m, Q and a are as defined in the description and

10

b) one or more ethylene modulators (II) selected from the group consisting of:

15

- inhibitors of ethylene biosynthesis which inhibit the conversion of S-adenosyl-L-methionine into 1-aminocyclopropane-1-carboxylic acid (ACC),
- inhibitors of ethylene biosynthesis which block the conversion of ACC into ethylene, or
- inhibitors of ethylene action, and also

to compositions comprising them and to their use for controlling harmful fungi.
